

### Life Cycle Assessment Copyright © Özgür ZEYDAN (PhD) http://www.ozgurzeydan.com/

## Life Cycle Assessment

LCA is an objective process to evaluate the environmental burdens associated with a PRODUCT, PROCESS, or ACTIVITY by:

- Identifying and Qualifying Energy and Material Uses and Releases on the Environment (*Inventory analysis*),
- 2. Assessing the Impact of Those Energy and Material Uses and Releases on the Environment (*Impact Analysis*),
- 3. Evaluating and Implementing Opportunities to Effect Environmental Improvements (*Improvement Analysis*).

# Life Cycle of Stuff

The assessment includes the entire lifecycle of the product, process or activity encompassing extraction and processing of raw materials, manufacturing, transportation and distribution, use/reuse, recycling and final disposal.

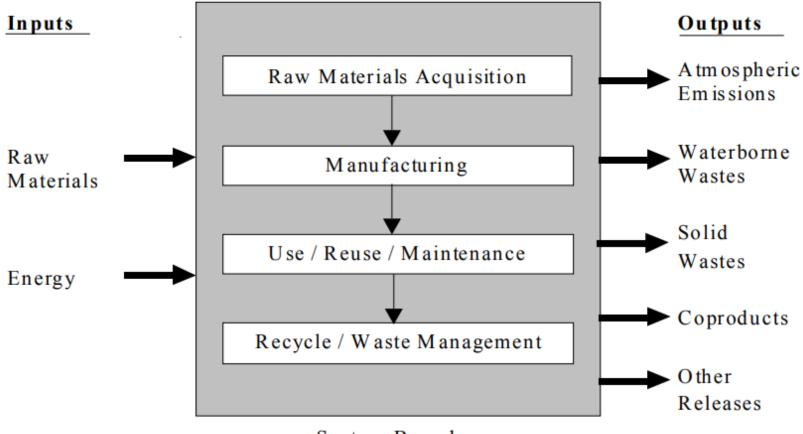

Curran, M. AND B. Lignon. EPA'S RESEARCH IN LCA METHODOLOGY. U.S. Environmental Protection Agency, Washington, D.C., EPA/600/A-93/154 (NTIS PB93212439), 1993.

| Stages                    | Green Tips   |  |  |
|---------------------------|--|--|--|
| Materials<br>Extraction   | Buy products made with recycled content  |  |  |
| Manufacturing             | Reduce   |  |  |
| Distribution              | Choose Sustainable and local products  |  |  |
| Usage                     | Power down   |  |  |
| End-of-Life<br>Management | Donate your used electronics and media<br>Recycle<br>Start your own compost pile<br>Be waste conscious |  |  |

# Life Cycle Stages

#### System Boundary

Life Cycle Assessment: Principles and Practice, EPA/600/R-06/060, 2006

### Phases of an LCA

### Phases of an LCA

- Goal definition and scoping: the phase of the LCA process that defines the purpose and method of including life cycle environmental impacts into the decision-making process.
- Inventory Analysis: The identification and quantification of energy, resource usage, and environmental emissions for a particular product, process, or activity.
- Impact Assessment: The assessment of the environmental consequences of energy and natural resource consumption and waste releases associated with an actual or proposed action.

# Commonly Used Life Cycle Impact Categories

| Impact<br>Category                  | Scale             | Examples of LCI Data<br>(i.e. classification)  | Common Possible<br>Characterization<br>Factor | Description of<br>Characterization<br>Factor   |
|-------------------------------------|-------------------|--|---|--|
| Global<br>Warming                   | Global            | Carbon Dioxide (CO <sub>2</sub> )<br>Nitrogen Dioxide (NO <sub>2</sub> )<br>Methane (CH <sub>4</sub> )<br>Chlorofluorocarbons (CFCs)<br>Hydrochlorofluorocarbons<br>(HCFCs)<br>Methyl Bromide (CH <sub>3</sub> Br) | Global Warming<br>Potential                   | Converts LCI data to<br>carbon dioxide (CO <sub>2</sub> )<br>equivalents<br>Note: global warming<br>potentials can be 50,<br>100, or 500 year<br>potentials. |
| Stratospheric<br>Ozone<br>Depletion | Global            | Chlorofluorocarbons (CFCs)<br>Hydrochlorofluorocarbons<br>(HCFCs)<br>Halons<br>Methyl Bromide (CH <sub>3</sub> Br)   | Ozone Depleting<br>Potential                  | Converts LCI data to<br>trichlorofluoromethane<br>(CFC-11) equivalents.  |
| Acidification                       | Regional<br>Local | Sulfur Oxides (SOx)<br>Nitrogen Oxides (NOx)<br>Hydrochloric Acid (HCL)<br>Hydroflouric Acid (HF)<br>Ammonia (NH <sub>4</sub> )  | Acidification<br>Potential                    | Converts LCI data to<br>hydrogen (H+) ion<br>equivalents.  |

# Commonly Used Life Cycle Impact Categories

| Impact<br>Category      | Scale | Examples of LCI Data<br>(i.e. classification)  | Common Possible<br>Characterization<br>Factor  | Description of<br>Characterization<br>Factor   |
|-------------------------|-------|--|--|--|
| Eutrophication          | Local | Phosphate (PO <sub>4</sub> )<br>Nitrogen Oxide (NO)<br>Nitrogen Dioxide (NO <sub>2</sub> )<br>Nitrates<br>Ammonia (NH <sub>4</sub> ) | Eutrophication<br>Potential                    | Converts LCI data to<br>phosphate (PO <sub>4</sub> )<br>equivalents.                                   |
| Photochemical<br>Smog   | Local | Non-methane hydrocarbon<br>(NMHC)  | Photochemical<br>Oxident Creation<br>Potential | Converts LCI data to ethane $(C_2H_6)$ equivalents.  |
| Terrestrial<br>Toxicity | Local | Toxic chemicals with a reported<br>lethal concentration to rodents   | LC <sub>50</sub>                               | Converts LC <sub>50</sub> data to<br>equivalents; uses multi-<br>media modeling,<br>exposure pathways. |
| Aquatic<br>Toxicity     | Local | Toxic chemicals with a reported<br>lethal concentration to fish  | LC <sub>50</sub>                               | Converts LC <sub>50</sub> data to<br>equivalents; uses multi-<br>media modeling,<br>exposure pathways. |

# Commonly Used Life Cycle Impact Categories

| Impact<br>Category    | Scale                       | Examples of LCI Data<br>(i.e. classification)Common Possible<br>Characterization<br>Factor |                                 | Description of<br>Characterization<br>Factor   |
|-----------------------|-----------------------------|--|---------------------------------|--|
| Human Health          | Global<br>Regional<br>Local | Total releases to air, water, and soil.  | LC <sub>50</sub>                | Converts LC <sub>50</sub> data to<br>equivalents; uses multi-<br>media modeling,<br>exposure pathways.             |
| Resource<br>Depletion | Global<br>Regional<br>Local | Quantity of minerals used<br>Quantity of fossil fuels used                                 | Resource Depletion<br>Potential | Converts LCI data to a<br>ratio of quantity of<br>resource used versus<br>quantity of resource left<br>in reserve. |
| Land Use              | Global<br>Regional<br>Local | Quantity disposed of in a landfill<br>or other land modifications                          | Land Availability               | Converts mass of solid<br>waste into volume using<br>an estimated density.   |
| Water Use             | Regional<br>Local           | Water used or consumed   | Water Shortage<br>Potential     | Converts LCI data to a<br>ratio of quantity of<br>water used versus<br>quantity of resource left<br>in reserve.    |

#### **Impact Categories and Associated Endpoints**

The following is a list of several impact categories and endpoints that identify the impacts.

#### **Global Impacts**

<u>Global Warming</u> - polar melt, soil moisture loss, longer seasons, forest loss/change, and change in wind and ocean patterns.

Ozone Depletion - increased ultraviolet radiation.

<u>Resource Depletion</u> -decreased resources for future generations.

#### **Regional Impacts**

<u>Photochemical Smog</u> - "smog," decreased visibility, eye irritation, respiratory tract and lung irritation, and vegetation damage.

Acidification - building corrosion, water body acidification, vegetation effects, and soil effects.

#### **Local Impacts**

Human Health - increased morbidity and mortality.

- <u>*Terrestrial Toxicity*</u> decreased production and biodiversity and decreased wildlife for hunting or viewing.
- <u>Aquatic Toxicity</u> decreased aquatic plant and insect production and biodiversity and decreased commercial or recreational fishing.
- <u>Eutrophication</u> nutrients (phosphorous and nitrogen) enter water bodies, such as lakes, estuaries and slow-moving streams, causing excessive plant growth and oxygen depletion.

Land Use - loss of terrestrial habitat for wildlife and decreased landfill space.

<u>Water Use</u> - loss of available water from groundwater and surface water sources.

### Impact Assessment

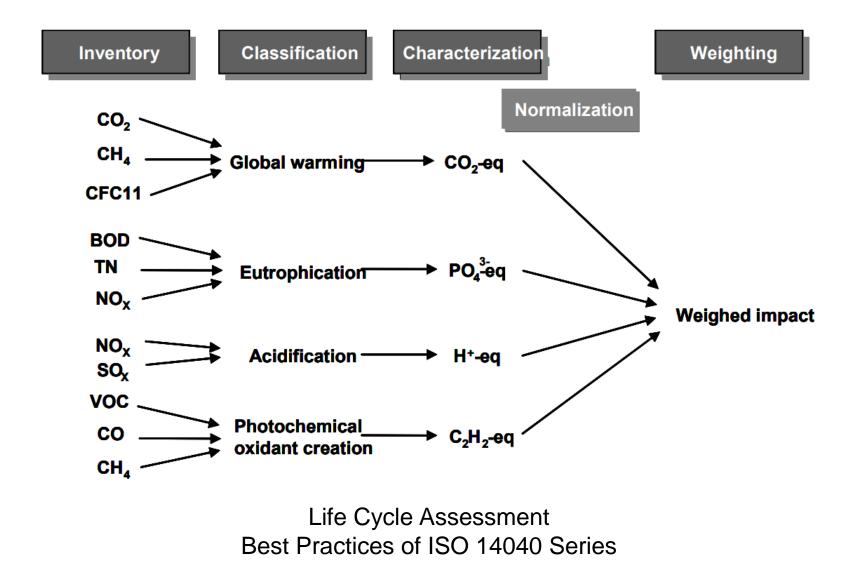

Impact Indicators = Inventory Data × Characterization Factor

Example:

- Chloroform GWP Factor Value = 9 Quantity = 5kg
- Methane GWP Factor Value = 21 Quantity = 2kg
- •
- Chloroform GWP Impact
- Methane GWP Impact

- = 5kg x 9 = 45
- = 2kg x 21 = 42

### From Midpoint to Endpoint

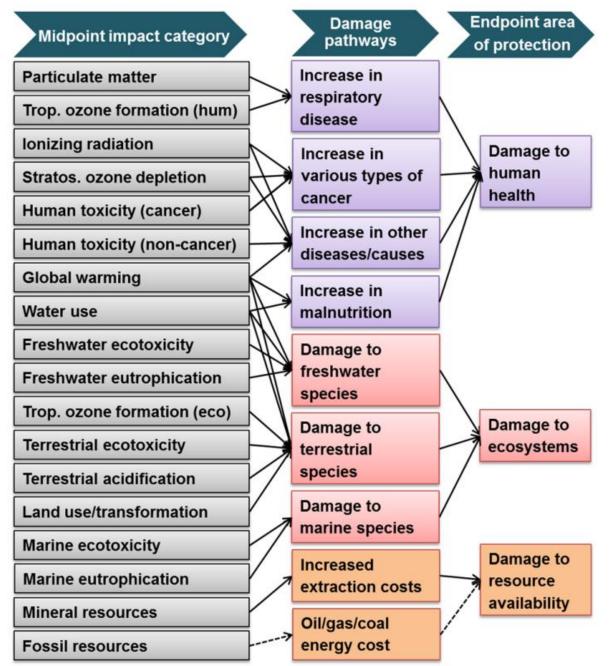

Figure 1.1. Overview of the impact categories that are covered in the ReCiPe2016 methodology and their relation to the areas of protection.

#### <u>ReCiPe2016v1.1</u>
